Overview

reComputer Robotics GMSL Board uses the MAX96712 deserializer and supports up to 6Gbps data rate per channel, with support for multiple GMSL cameras in Jetpack. It is designed for robotics applications including object detection, 3D reconstruction, BEV detection, high-performance vision with Jetson Orin NX, and 3D vision using the Orbbec Gemini 335LG Stereo Vision 3D Camera.

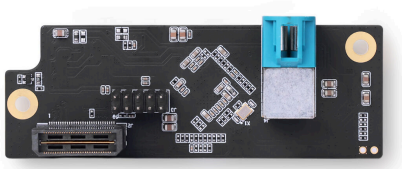

Key Features

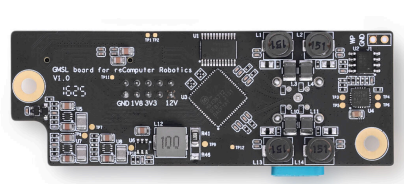

01 **Industry-standardDeserializerSelectionUsesMAX96712asdeserializer**

02 **6GbpsDataRate SupportSupportsupto6Gbpsdatarateperchannel**

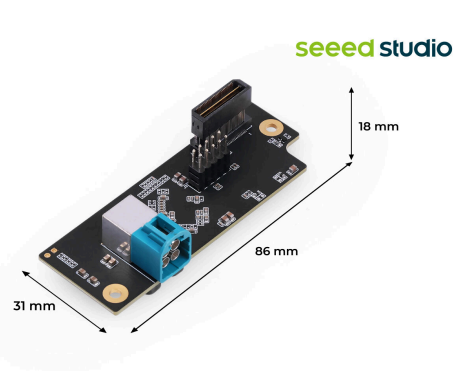

03 **Ready-toUseGMSLCameramodelsSupportsmultipleGMSLcamerasinJetpack(Seetablebelowformodels)**

Hardware Overview

Applications

- **Robotics (Object detection and 3D reconstruction)**
- **BEV Detection**
- **High-Performance Vision for Robotics:** Combining a GMSL 2 camera with a reComputer Robotics enables advanced vision-based robotics. Sensing 3MP GMSL 2 camera supports real-time object detection, panoramic environment awareness, and multi-camera 3D reconstruction . The high-bandwidth, low-latency GMSL 2 link supports long cable runs and multi-camera setups, while the Jetson Orin NX delivers real-time AI processing for perception, mapping, and control.
- **3D Vision and GMSL 2 Connectivity for Robotics:** The reComputer Robotics GMSL Extension supports the Orbbec Gemini 335LG Stereo Vision 3D Camera, providing accurate real-time 3D perception for advanced robotics. With the MAX96712 deserializer and mini-FAKRA connector, it ensures secure, low-latency, and reliable data transmission, ideal for AMRs, robotic arms, and collaborative robots. Precise depth sensing enables smarter navigation, robust object recognition, and reliable obstacle avoidance across mobile robots, delivery systems, and shelf-stocking applications.
